Stribling's Nurseries

Devoted to the production of "Growing Quality," Trees and Vines for commercial orchardist, viticulturist, and for those who enjoy fine fruit. Stribling's offer one of California's largest selections of June bud and yearling trees on both standard and resistant rootstocks. Specializing in resistant rootstocks, we maintain an experimental orchard near Atwater in Merced County. This is where our Stribling's S-37 originated and was proven the best nematode resistant peach rootstock. If you are confronted with the nematode problem we strongly urge that you plant: STRIBLING'S S-37 (Pat. Pending) Shalil or Mariana Rootstock.

If you have not received our 1949 Garden Guide, ask for your copy.

GENERAL INFORMATION

Our Stock is produced at our Helmer, Kelley, Plainsburg and La Branza, growing grounds in Merced County, under our personal supervision. In choosing land on which to grow our stock, we select a sandy loam. This type of soil, combined with the thorough manner in which we care for our nursery, produces a strong, well-hardened tree, with an ideal root system.

OUR BUDS are selected personally from the heaviest producing trees in the best orchards of the section.

OUR THIRTY EIGHT YEARS EXPERIENCE in the nursery business enables us to give you expert advice on planting and care of trees and vines. And please remember that when we give you advice, it is what we conscientiously believe and not in any way influenced by what we have to sell.

SMALL ORDERS are given the same consideration that large orders receive. This is evidenced in the fact that we make a specialty of **Family Orchards**.

OUR GUARANTEE: We handle our stock to the best of our ability to keep it in a live, healthy condition, so we must ask that all complaints be made within 10 days after receipt of stock. We use the greatest care in keeping our stock true to name, but for any error we will not be liable for more than the original purchase price of the stock mislabeled. In the case of unexpected catastrophe we are released from filling orders.

Packing is done at cost and the following prices are at our nursery. However, we make delivery where the size of the order and the distance warrants it. Other orders are shipped collect, by the safest and fastest method.

TERMS: Ten percent of the amount of the order must accompany each order to insure its being reserved, and the balance is to be paid on delivery unless terms are arranged in advance.

SALES TAX: Nursery stock sold within the state is subject to 2½% California Sales Tax. Kindly add the sales tax to the total amount of your order.

INSPECTION: The state law requires that all nursery stock must be inspected by your County Agricultural Commissioner immediately upon its receipt. We notify the Agricultural Commissioner at County of destination, when each shipment is made.

Inspection is for your protection and purchasers should cooperate to the fullest with the inspector. Our stock is free from disease and pests and may be shipped anywhere. We guarantee it to pass inspection, and stand by any loss occasioned by its failure to do so.

QUANTITY RATES: The total number of trees or vines ordered determine which quantity rate applies. For example, if 25 Almond and 25 Peach trees are ordered, you are entitled to the "50" rate on both. Walnuts and Citrus are not included in this grouping.

GRADING: All trees are graded by caliper, rather than by height. Thus when planted out and cut back they are of uniform size and more satisfactory to the planter. The sizes given in this list represent the approximate height in feet, and correspond to the following caliper measurements taken two inches above the bud.

WE INVITE INSPECTION OF OUR NURSERIES AND GROWING GROUNDS

NUMBER OF TREES TO PLANT AN ACRE Square Method

6 x 6.....	1210	16 x 16.....	170
6 x 8.....	907	20 x 20.....	109
6 x 10.....	726	20 x 24.....	90
6 x 12.....	605	22 x 22.....	90
7 x 12.....	520	24 x 24.....	75
8 x 8.....	608	25 x 25.....	69
8 x 10.....	544	30 x 30.....	48
8 x 12.....	454	35 x 35.....	35
10 x 10.....	435	40 x 40.....	27
10 x 12.....	363	50 x 50.....	18

RULE: Multiply the distance in feet between the trees by the distance the plants are apart in the rows and the product divided into 43,560 will give the number of plants or trees to the acre.
